SUMMARY

Senior Android Engineer with 13+ years building secure, regulated mobile products in digital identity, medtech, banking and telecom. I combine deep Android and mobile-security expertise — SDKs, PKI, mTLS, hardening — with AI-agentic engineering: systems where agents speed up delivery while engineers stay in control.

KEY HIGHLIGHTS

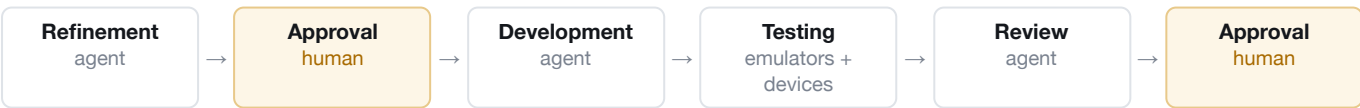

- **Agentic SDLC for Android (Digidentity, 2026):** designed and run a pipeline of Claude Code agents, connected to Jira, Figma and GitLab via MCP, that takes a ticket from refinement to merge request — with testing on emulators and physical devices and two human approval gates.
- **Digital identity security (Digidentity, 2025–present):** Android SDK and decentralized identity wallet with passwordless login, X.509 digital signatures and DexGuard hardening.
- **Medical-device security (Ypsomed, 2022–2024):** led the Android and iOS SDKs for an EU self-injection device, with an encrypted channel authenticated by PKI and certificate-based mTLS.

EXPERIENCE

Digidentity — Senior Android Engineer Jan 2025 – Present
Digital identity and trust services

2026 — AI-agentic development and testing

- Designed and built an automated agentic development and testing system that runs on a dedicated server with Android emulators and physical devices.
- Built the agents on Claude Code and connected them to Jira, Figma and GitLab through MCP servers, giving them direct access to tickets, designs and merge requests.
- Agents read the Jira ticket and Figma designs, plan the change, write Kotlin/Compose code and tests, and validate it on real devices.
- Kept engineers in control: two human approval gates guard the plan and the final merge request.

- Translated Figma designs into Compose components and worked with design and product through Jira.

2025 — Identity SDK and wallet

- Developed the Android SDK and a decentralized identity wallet.
- Built features for identity verification, onboarding and secure authentication, including passwordless login (PLS).
- Implemented digital signatures with X.509 certificates.
- Applied DexGuard obfuscation and hardening to protect the app against reverse engineering.

InnoIT — Lead Android Engineer, Ypsomed project Jun 2022 – Dec 2024
Medtech

- Led the Android and iOS SDKs for an EU medical self-injection device.
- Built an encrypted communication channel between the Android device and the medical device, authenticated with PKI and certificate-based mTLS.
- Set up a high-reliability architecture with TDD, Coroutines and XP practices.
- Owned CI/CD pipelines for SDK builds, tests and releases.

Vodafone — Android Engineer	Sep 2019 – Jun 2022
Telecom e-commerce	
Built core features for Vodafone's e-commerce mobile app, improving UX and stability.	
Unisys — Android Engineer	Feb 2019 – Sep 2019
ENIRE airport operations app in Java with Clean Architecture, MDM and unit tests.	
EVO Banco — Software Engineer	Jun 2018 – Dec 2018
CRM system with Java 8, Spring Boot, SQL Server and Angular.	
Wallbox — Android & iOS Developer	Jan 2018 – Jun 2018
EV charger control over Bluetooth and Wi-Fi.	
PICKUP — Backend & Mobile Developer	Feb 2016 – Dec 2017
Backend and mobile apps for a food delivery platform, including PCI-DSS compliant payments.	
Freelance — Java Developer	Jan 2010 – Dec 2011
Designed and shipped a desktop insurance management app (Java Swing, JasperReports, MySQL).	

TECHNICAL SKILLS

Languages	Kotlin, Java, Python
UI	Jetpack Compose, Material 3, Figma-to-code, XML Views
Architecture	Clean Architecture, MVVM, MVI, modularization, SOLID
SDKs	Android and iOS SDK development, SDKs consumed by external teams
Async & DI	Coroutines, Flow, RxJava, Dagger 2 / Hilt
Security & identity	PKI, X.509 certificates, mTLS, certificate pinning, passwordless login, digital signatures, Android Keystore, device binding, encrypted device channels, DexGuard and R8/ProGuard hardening, identity verification, decentralized wallets, PCI-DSS payments
AI-agentic engineering	Agentic SDLC design, multi-agent workflows, Claude Code, MCP servers (Jira, Figma, GitLab), context engineering, human-in-the-loop gates
Testing & quality	TDD, JUnit, Mockito, UI and instrumented tests on emulators and real devices, code review
CI/CD & tools	GitLab CI, Jenkins, Gradle, Jira, Figma, Git
Hardware	Bluetooth / BLE, Wi-Fi device control, medical devices, MDM
Methods	XP, Scrum (Certified Scrum Master), Agile

EDUCATION & CERTIFICATIONS

- Associate Degree in Computer Programming — Fermín Toro University, 2006
- Certified Scrum Master

SIDE PROJECTS

- Python and Flask microservices for bot execution and alerting systems.
- Ongoing work on AI agents and automation tooling for mobile development.
